

Real-World Evidence Study

The Purpose

Real-world evidence (RWE) studies are performed to support decision-making among stakeholders and to increase understanding of the epidemiology, incidence/prevalence, treatment patterns, healthcare resource utilization (HRU), and economic burden of diseases.

About the Client

INDUSTRY
Small-size Pharma

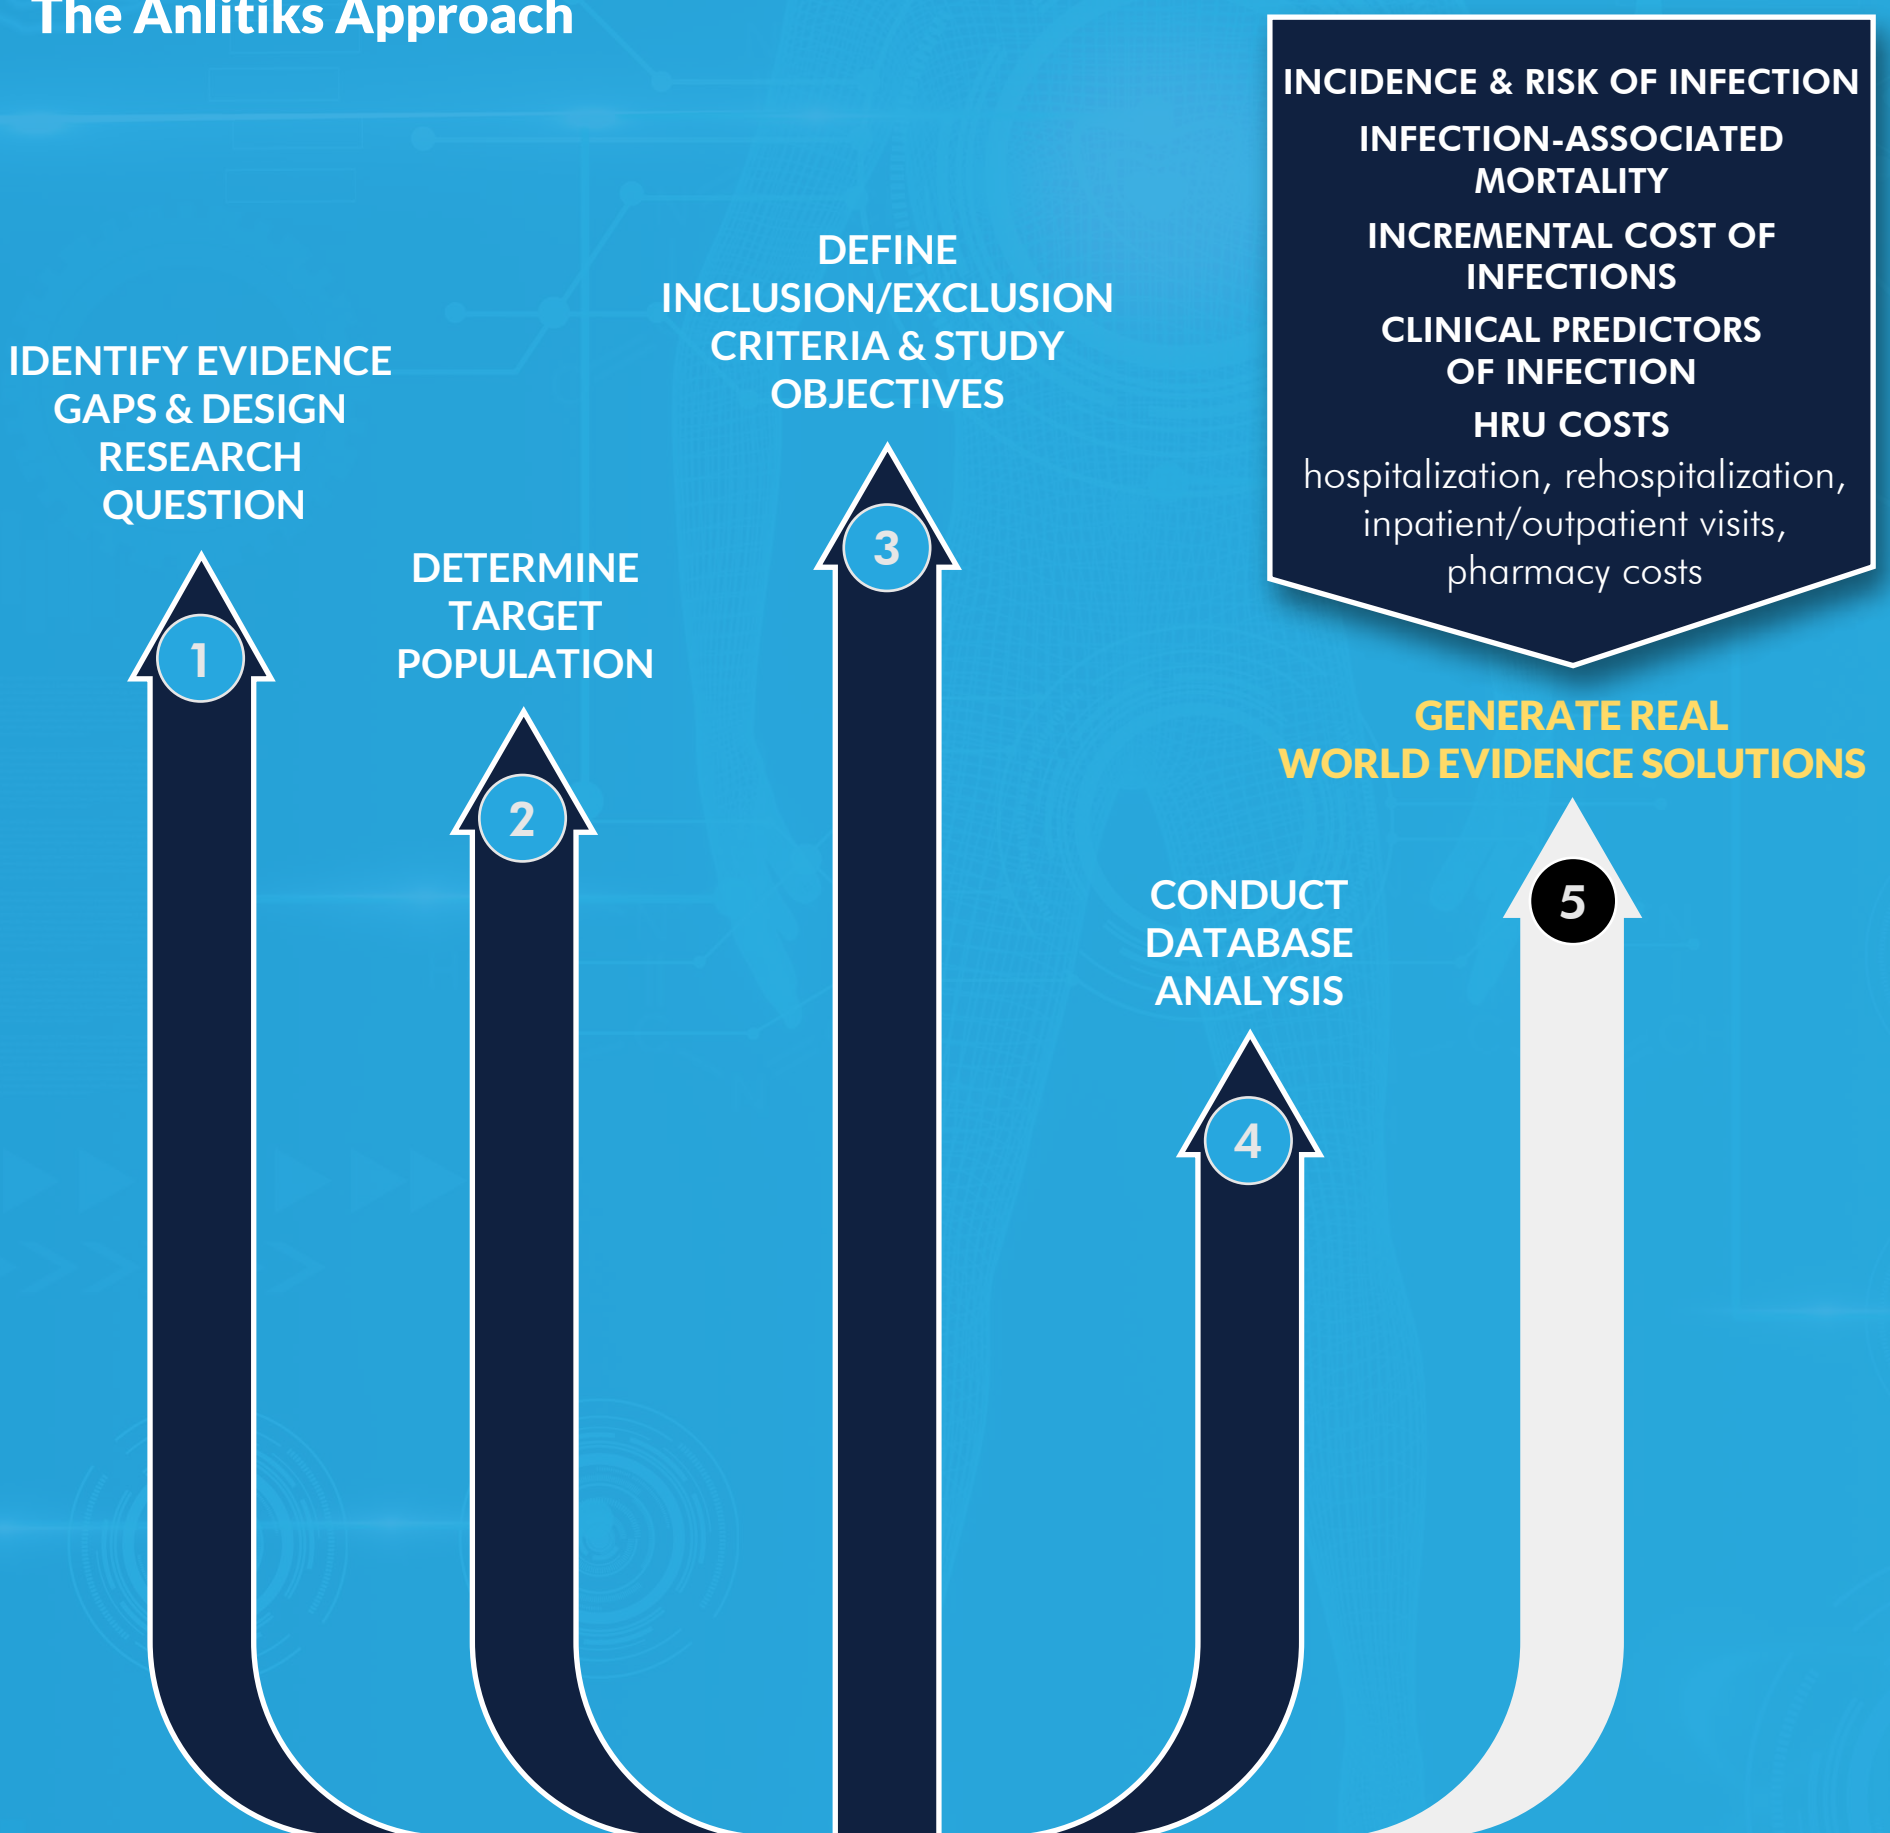

LOCATION
US

THERAPEUTIC AREA
Nephrology

Client Requirement

To assess the epidemiology, practice and treatment patterns, incidence, clinical predictors, HRU, and incremental costs attributable to infections acquired by patients with kidney disease

The Anlitiks Approach

Anlitiks' Contribution

- Anlitiks carried out a RWE study to assess the economic burden of infections among kidney disease patients.
- Results of the analysis highlighted the necessity of taking effective measures to decrease the incidence of infections for this patient population.
